

User Instructions

1. Launching the calculator

Start by running the file GIT_GROUP02.py

2. Choosing an option

After running the file, a selection menu will appear:

- To convert from binary to hexadecimal, press 1 and hit Enter
- To convert from hexadecimal to binary, press 2 and hit Enter
- To exit the program, press 0 and hit Enter

3. Entering input for conversion

- For binary to hexadecimal conversion, any input that contains characters other than 0, 1, a decimal point, or spaces (which are automatically removed), will result in an error message.
- For hexadecimal to binary conversion, any input that contains characters other than 123456789ABCDEF (uppercase only), a decimal point or spaces will result in an error message
- For both options, once valid input is provided and enter is pressed, the conversion result will be displayed.

4. Ending the program

When finished using the calculator, press 0 to stop execution and exit the program
